Advanced CD Player with Selectable Filters and Custom Designed Servo System

It takes CD performance to new heights at anywhere near the price. The Cambridge Audio Azur 650C optimizes a pair of WM8740 24-bit/192 kHz-capable DACs implemented in a dual differential configuration. Since each channel has its own DAC to process information, completely separate and symmetrical analog filter circuitry can be implemented for excellent imaging.

The 650C also features the sophisticated Four-Pole Dual Differential Double Virtual Earth Balanced version of this filter resulting in an incredibly low noise floor, barely measurable distortion and ultimately unprecedented levels of performance.

"An Open, Detailed Presentation"

"Like the partnering Azur 650A amp, this player has an open, detailed presentation," reports a Five Star review in England's *What Hi-Fi? Sound and Vision* magazine. "It's hard to think of a rival that keeps so organized when pushed."

"Open, airy, sweet, civilized – that's the sound of the 650A and 650C together," notes Sam Tellig in *Stereophile*.

The 650C boasts a new in-house-designed servo solution. While many 'comparable' CD players use an inferior CD/DVD-ROM derived drive, the 650C takes full advantage of Cambridge Audio's audio-only CD transport,

"...This player has an open, detailed presentation...It's hard to think of a rival that keeps so organized when pushed."

-in a Five Star review in England's What Hi-Fi? Sound and Vision.

"This is a very fine player" – What Hi-Fi? August 2009

which is coupled to a new highly sophisticated S3 Custom CD servo. This third-generation audiophile servo employs an all-new chipset and the latest double-sided surface-mount technology for ultra-short signal paths with freedom from wire links. The net result gives the 650C extraordinary ability to retrieve maximum digital information while maintaining extremely low jitter.

The 650C's well-proven transport has been re-worked to facilitate even quieter operation, and a new bracing mechanism (derived from the 740 Series) guarantees incredible rigidity. The 650C includes a new Navigator remote, which also controls Azur amplifiers and docked iPods, and a new black high-contrast LCD display.

Cambridge Audio Azur 650C CD player with dual 24/192 DACs, selectable digital filter settings, and custom-designed servo system [CA650C], choose black or silver finish, **Regular \$779, now only \$499.00**

Cambridge Audio 650T FM/AM Sirius-Ready Tuner

Don't spend more than you have to on a full-featured tuner, when the affordable Cambridge Audio 650T has everything you could ever expect from a hi-fi tuner and much more! This powerful Sirius-Ready FM/AM tuner is just waiting to unleash the potential of a huge array of satellite stations now available in North America and Canada. All that's required is a plug-and-play Sirius antenna device and subscription to activate your own Sirius service.

Analog Domain FM/AM Tuner Section

And while satellite radio's convenience and choice is indisputable, there's no escaping the quality of FM broadcasts. To this end, the 650T has a neat trick up its sleeve in the form of a new and completely separate analog domain FM/AM tuner section. FM sound quality is truly exceptional. Separate FM and AM antenna connections ensure the optimal aerial can be used for each band.

And here's an added plus. Like the Azur-series amplifiers and CD players, the 650T benefits from Cambridge Audio's Energy Star approved eco-friendly standby circuit. This amazing design means the 650T consumes

- Separate True Analog FM/AM Stage
- Sirius Satellite Radio Compatibility
- Oversize Toroidal Transformer

less than one single watt of power in standby mode, and with absolutely no resulting sound degradation.

The 650T is designed for reeling in your favorite stations and making them sound great. It's high sensitivity means that you can enjoy better reception from some fringe stations that may have eluded you before. High selectivity helps separate the signal you want to listen to from adjacent station interference. For best performance, make sure you connect a quality antenna that will bring out the best in the 650T.

Natural Contour Technology

The 650T also features Natural Contour Technology (NCT), developed by Cambridge Audio to counter the sometimes 'flat' presentation of compressed digital sources (such as some digital radio stations).

In addition to these sonic and environmental benefits, the new Azur range has a completely fresh look. The 650T features a redesigned case-work featuring a new high contrast reverse display, a thicker brushed aluminum front panel, a seamless wrap-over lid assembly, and dual-layer damped feet, all of which contribute to better resonance control.

Cambridge Audio Azur 650T FM/AM Sirius-compatible tuner [CA650T], in black or silver finish, **Regular \$529, now only \$299.00**
